Brushwood

WHAT IS BRUSHWOOD?

What is Brushwood? – Imported for over 20 years, Brustics Brushwood is made from Australian “Broom” – Melaleuca Uncinata, a cousin of manuka but a harder and more durable wood. It is a renewable resource and it’s harvesting helps to lower the risk of forest fires.

The Brushwood is compressed by machine and tightly stitched with wire. The standard fence panel is 45mm thick and there is also a 25mm thick panel. Not to be confused with imitations – Brustics Brushwood should not be confused with the very flimsy, thin product marketed in a roll, which is sourced from Asia.

Instant privacy, instant hedge - these are some of the descriptors used by our customers.

Durability & Maintenance – As with many of our natural products, the life expectancy depends on the location and conditions it is exposed to. Provided Brustics panels are supported clear of the ground they last for more than 20 years, requiring little or no maintenance. If left uncapped, after a number of years (7 -10), it can start to thin out on top this does not necessarily detract from the fence. However, if you wish to avoid this, a capping should be used; or treat the top with a preservative such as Metalex.

The tea tree oil in the brush is a natural deterrent to insects, therefore they do not tend to like the brush, however as it ages and if required spray the Brushwood with a residual insecticide such as “Yates Complete Lawn Control”

You will enjoy your Brushwood privacy for many years.

900	1100	✓	✓
1200	1100	✓	
1600	1100	✓	✓
1800	1100	✓	✓

BORDER STYLE

The Brushwood panels are placed between the posts and framed with 25 x 25mm beading. It looks the same from both sides.
To prevent sag the panels sit on the top edge of a 150 x 50mm plinth.
For a full installation guide visit www.brustics.co.nz

STANDARD STYLE

A continuous Brushwood line – panels are placed along the front of the posts and stapled to a rail. The frame will be seen on one side (see photo above). To prevent sag the panels sit on the top edge of a 150 x 50mm plinth.
For a full installation guide visit www.brustics.co.nz

Brustics Brushwood panels are used to provide privacy and screen unsightly areas. Many customers have been referred to us by real estate agents, as a way of enhancing the value of their home prior to resale.

- **Noise absorption** – The type of Brushwood used, the way it is compressed, and the fact that the panels are 45mm thick (more than double most wood panels) provides for good noise absorption.
- **Swimming pools** – Brustics Brushwood fences comply with the Fencing of Swimming Pools Act – check with your council for specific requirements.
- **Graffiti** – Brustics panels are not as prone to being tagged as most other fence types as there is no solid surface to write on.
- **Windbreak** – Brustics Brushwood panels are an excellent windbreak. They filter wind which avoids turbulence on the leeward side.

DELUXE STYLE

The Brushwood panels and posts are covered with roll caps. Please call us for install instructions 0800 278 784.

Brustics Fencing

Bamboo

BRUSTICS BAMBOO

An amazing transformation at an affordable price - combining the best of Eastern and Western design, these products will make distinctive fencing, screens and shading for both exterior and interior applications.

Installed outside, the 'natural' bamboo weathers to a silver grey similar to timber, the 'smoked' will weather to a mushroom colour after 3-6 months. Once weathered the bamboo becomes more porous, enabling varnish or stain to penetrate, something which cannot be done when new. We recommend the smoked bamboo is stained after 3-6 months and the natural bamboo after 12-18 months. Used as fencing the expected life is 7-10 years. Capping the bamboo with timber when installing, and staining will extend the life even more.

BRUSTICS EUCALYPT

Light yet strong, Eucalypt provides a natural pool fence and is a popular choice for coastal properties, pool fencing and playgrounds. The fence has 2 galvanised steel rods top and bottom threaded through the staves which are then rope bound. It is recommended the Eucalypt is installed either by attaching to posts at 1.1m centres or screwed to a frame with top and bottom rails.

Eucalypt Poles

Eucalyptus poles have seen a steady and growing increase in design applications. Leading architects and landscape designers are impressed with its ability to add organic texture and visual impact to interior and exterior spaces, whether a striking vertical wall, floating ceiling or pergola. Builders and homeowners love the ease of installation, durability and instant transformation it makes within a space.

Water Garden

Oase
LIVING WATER

Brustics is the NZ distributor for Clearpond and Oase which covers all your water garden requirements and offers a huge selection of garden pond products including pond pumps, submersible pumps, pond filters, water features and pond liners. Visit www.clearpond.co.nz for more information and to view the full range of products.

Playground Solutions

Nature is a vital source of discovery and delight. Brustics has a range of natural products that provide an alternative when providing containment and landscaping of school and preschool areas. Our range of gazebos, also offer the opportunity to take the classroom outside.

Brustics Eucalyptus & Bamboo fence panels provide traffic direction and yet pupils are also able to look through them, creating a sense of space and allowing interaction, even if they are in different areas of the school. They also allow teachers to observe pupils throughout the playground.

Kate Alison of Glendene Play centre says;

“We at Glendene Play centre, are so happy with our Brustics sandpit shade. We love not having to get something out to cover the sandpit each and every time. We can just walk in get the toys out and start playing, even if it’s raining.”

Thatch

BRUSTICS THATCH

Thatch roofs are the perfect outdoor shelter providing cool shade – typically 10° cooler than the outside temperature – and shelter from the rain.

They will withstand exceptionally high winds and are built with renewable materials.

CHOOSE FROM:

Natural Thatch Tiles

Nothing has quite the ambience, insulation and ease of installation of our natural thatch tiles. They will typically have a life of 5-7 years in New Zealand conditions and correctly installed will be “98%” waterproof – i.e. you can expect the odd drip of water if it is raining, so if you are wanting to install electrical equipment use one of the synthetic tile options over ply.

- Natural Standard tiles – The layered look. They are thicker and have a greater overlap cover than the other tiles therefore they are the most efficient tile option. Spacing approximately 300 - 350mm.
- Natural Tropical tiles – These ‘variegated’ tiles give flat outer roof surface, and can be installed to provide a traditional Tropical thatch or European (square edge) look, depending on the style of installation. Spacing approximately 250mm.

Synthetic Thatch Tiles

Available in two styles, Synthetic Palm (“SynPalm” flax type thatch) or Synthetic Reed (“SynReed”). They have a life of 15 years plus. The SynReed thatch is designed to be used over ply and with the combination of eave blocks will provide the look of a thick thatch roof without the need for maintenance. The palm thatch will be approx. 98% waterproof when used alone or can also be used over ply.

- SynReed Thatch – perfect for commercial situations these tiles provide a genuine thatch look and are normally used to cover ply. Their advantage is they require little or no maintenance and have exceptional longevity. Spacing approximately 230 - 250mm
- SynPalm Thatch – these tiles are 98% waterproof used alone or can be used to cover ply. Their advantage is they have a greater “cover” therefore are very economical. Spacing approximately 300-380mm.

BRUSTICS KITSETS

Cabanas, Fale roofs, and Umbrellas – we offer a range of kitsets designed to provide the best result if DIY install is preferred. The thatch is easily installed on a gable roof, however requires a special roof design to install on hip roofs. If you don’t know the difference between the two, please ask. Please note; fees apply to design roof structures and or re-design or rectify installations where we have not designed and or installed. (See price list for sizes).

Euro Wood fired Pizza Ovens

Forno Braga

FRONO BRAGA

Ready to Cook Wood fired Brick Oven made in Portugal

This quality wood fired oven is our best seller with its charming looks and ease of use.

Perfect all Rounder

- Cooks anything you can cook in a conventional oven such as roasts, chicken, fresh breads, pizza you name it. Whether you want to turn a simple family meal into something special, surprise your guests with an extraordinary meal cooked in your wood fired oven, or throw a pizza party for the kids, your Forno Braga wood fired oven does it all.
- This wood fired oven is our best seller and with its charming looks it is a true jewel in any outdoor area, and with its ease of use, it turns any cook into a Master Chef.
- The 37cm double doors allow you to better control the wood fire and thus the temperature inside the oven for the different kinds of cooking. The double door features a hole that is designed to fit our rotisserie for spit roasting (accessories).

Exceptional Features

- The Forno Braga is a real brick oven made in Portugal which is widely known for its superb clay qualities and craftsmanship - Portugal like other Mediterranean countries, has kept up the ancient tradition of wood fired cooking. They are hand made by Impexfire who have produced over 80,000 ovens since 1992.
- Specially made for Euro Wood Fired Ovens with extra insulation, black door and stainless steel flue, your Forno Braga oven will keep heat for hours.

Finished & Ready to Cook

- Their composition allows them to absorb heat quickly and retain heat for long periods therefore saving fuel. The cooking floor of the oven is made from refractory tiles that are resistant to high temperatures.

***Euro Wood fired Ovens is a division
of Brustics***

Maximus

MAXIMUS

Portable. Minimum Weight. Maximum results

At home, the bach or picnic. Never be without the taste of wood fired cooking.

What makes this Wood Fired Pizza Oven so Special?

- Fast heat up time of 20 minutes, and weighing only 55 kgs, this light weight wood fired oven is easily carried by two people and fits in the back of a wagon.
- The Maximus oven is made in Portugal, (not China) with quality refractory materials, yet it weighs just 55kg.
- Manufactured for over 5 years, to date over 30,000 units have been sold worldwide.
- This smart oven is capable of 20 -30 medium pizzas an hour or you can cook anything you like in it, with that authentic "wood fired" flavour.
- It heats up faster and does not have the weight and support issues associated with traditional wood fired ovens, which are typically ½ a tonne or more. Yet the oven is 60x60cm on the inside, more than enough room to accommodate 2 good size pizzas or use the free clay baking dish that comes with it - for meat, fish or bread.

This Oven is a Perfect Choice if:

- 1. You are renting or have a bach (crib to the Southern-ers) and want to "take it with you"
- 2. You want the choice of wood fired food at a moment's notice - perfect for city living
- 3. You want an oven that is economical to run – typically only 2-3 kilos of dry wood per hour
- 4. You want an oven you can put on a wooden deck
- 5. You enjoy cooking with family or friends – using Maximus is an event.

Maximus offers the best of both worlds.

- It can reach very high temperatures (typically cooked at 250- 300°C for pizza but also maintain lower heat for bread, lasagnas, rice, slow roasts etc
- The oven weighs approx, 55kg, 70x70cm on the outside, 60 x60cm inside, and 98cm high incl. the removable chimney.
